

Mac App Store Catalog

By Charlie Reich

After browsing for an hour or so searching for the simple way to locate a special App within the App webpage, and becoming frustrated at the lack of a catalog, or yearning for a simple way to type in your needs in a search box, be aware there is an Apps catalog available (*Now he tells me!*).

The Mac Apps Catalog literally lists thousands of Apps for a Mac. No page-after-page of fancy icons in random order to search through, just a good old-fashioned printed catalog listing by the App's title.

The catalog's left hand column currently lists twenty categories of Apps, with hundreds of Apps in each category. The Apps are displayed within each category page in random order, according to their popularity.

They can also be searched for by category in alphabetical sequence by selecting the category and then the A~Z listing in the catalogs heading.

The following link gets you into a wonderland of Apps for the Mac...Enjoy!
