

- Run SOFTWARE Update! Install.
- Run DISK UTILITY -- Repair Permissions
- BACKUP -- Address Book (Contacts); Calendar (iCal); Bookmarks (Safari)

Be sure ALL are the way you want them on your “desktop” computer

Open Address Book, choose File, Export, Address Book Archive

Open iCal, choose File, Export, iCal Archive

Open Safari, choose File, Export Bookmarks

- Open iDisk, Drag all you want to save into a Folder (may take awhile)
(If you open a new Finder Window, iDisk should be listed under Devices)
- MAIL -- Once you create your iCloud email address (or use your current MobileMe, mac.com or me.com address), you will have web mail.
BTW, I find that my Mail is now faster!!

NOW -- You have finally made up your mind to go to iCLOUD ----

- RESTART your computer! Be sure you are online.
- CLICK on this link <http://www.apple.com/icloud/> or copy into Safari.
 - If you currently have a MobileMe account, your iCloud ID/Password is it!!!!
 - If you go to System Preferences on your iMac or Macbook, you will see MobileMe, click on it and continue.....
- (My suggestion, worked for me!)
Begin with your “main” computer, either create an iCloud account or migrate from MobileMe to iCloud on that “main” computer, then open other devices, settings, turn on.
- VOILÀ !!!!!!! From now on when you make a correction, addition, deletion, etc on any one device it appears on all.

- Once you open Mail, you will see your iCloud Account and all other accounts you have such as Hotmail, AOL, Gmail, YahooMail, etc.
 - Access iCloud Webmail <http://www.icloud.com>
- Access other webmail via their portal such as <http://www.aol.com>

Demos: Show how it works!!!!!!
